## Skills

- JavaScript | TypeScript | Node | Vue | Express | NestJS | Jest | Redis | MongoDB | Postgres | Neo4j | RabbitMQ | GraphQL | Apollo | Git
- Google Cloud Platform | Heroku | Vercel | Firebase | Docker | CI/CD | Jest | SonarQube | GitHub | GitLab | Apollo Studio | DataDog
- Frontend | Backend | Full-Stack | English, Portuguese

## Experience

- |  |  |                             |                            |
|--|--|-----------------------------|----------------------------|
| <b>Software Engineer II</b>  | <b><u>Gupy</u></b>                         | <i>São Luís, MA, BRAZIL</i> | <b>Jun/2022 – Now</b>      |
| <ul style="list-style-type: none"><li>• Developed a Reels-like service using several modern technologies (<b>TypeScript, NodeJS, NestJS, Redis, Neo4j</b>) and cloud services (<b>GCP</b>), keeping best practices with automated testing, integration, and deployment.</li><li>• Monitored several applications using <b>Datadog, Cloud Logging, New Relic</b>, and other observable tools over 30 services to check on systems health, life span, failures, and bottlenecks.</li><li>• Designed an event-driven architecture, creating asynchronous communication between services with low latency and high availability over <b>RabbitMQ</b>, running everything on cloud containers (<b>GCP</b>).</li></ul>   |  |                             |                            |
| <b>Software Engineer</b>   | <b><u>Niduu</u></b>                        | <i>São Luís, MA, BRAZIL</i> | <b>Nov/2019 - May/2022</b> |
| <ul style="list-style-type: none"><li>• Decreased the number of APIs endpoints and complexity on queries for resources in our back-end by developing an <b>API Gateway</b> using <b>GraphQL's</b> Apollo Federation (Schema Stitching) combining several different <b>NodeJS</b> applications from different domains into a single endpoint.</li><li>• Developed and Meetup-like service to help customers create their events with its employees, make room reservations, send real-time app notifications using <b>Twilio's API</b>, and generate reports to managers using <b>NoSQL</b> databases.</li><li>• Developed several back-end services using a lot of different web technologies like <b>NodeJS, TypeScript, NestJS</b>, and databases (<b>SQL</b> and <b>NoSQL</b>), <b>Postgres, Mongo, Redis</b>, and <b>Neo4j</b>, running everything on the cloud (<b>GCP, AWS, Heroku, Vercel, Firebase</b>), with 1.6k daily hits on average.</li></ul>                            |  |                             |                            |
| <b>Full-stack Developer</b>  | <b><u>Terra Viva</u></b>                   | <i>São Luís, MA, BRAZIL</i> | <b>Aug/2018 - Oct/2019</b> |
| <ul style="list-style-type: none"><li>• Built several applications integrated into many existing systems, using <b>VueJS, NodeJS</b>, and <b>Firebase</b>, to connect loose business rules across the company, which increased productivity between sales and admin teams, lowering average task completion time by 46%.</li><li>• Built a fully customized Customer Relationship Management System (CRM) - using <b>Quasar (VueJS-based Framework)</b>, <b>Heroku</b>, and <b>NoSQL</b> Databases (<b>Firestore</b> and <b>MongoDB</b>) - to manage the company's sales pipeline and routines performed by employees and external sellers, decreasing expenses on third party applications by over 50%.</li><li>• Developed several Landing Pages using <b>NuxtJS</b> (for better AdSense and SSR) and several web technologies (<b>GraphQL, WebSockets, PubSub</b>), to integrate existing platforms into a single application (CRM) which increased sales overall by 26%.</li></ul> |  |                             |                            |
| <b>Software Developer</b>  | <b><u>State University of Maranhão</u></b> | <i>São Luís, MA, BRAZIL</i> | <b>Apr/2016 - Jul/2018</b> |
| <ul style="list-style-type: none"><li>• Collaborated to implement a new Integrated Academic Activities Management System at the university that directly impacted the activity of more than 1800 employees and 25000 students.</li><li>• Developed several applications using <b>PHP (Laravel)</b>, <b>NodeJS, Angular, MySQL, Apache</b>, and other web technologies - running everything on premises - used by the university's rector, 750 employees, and more than 1200 professors.</li></ul>  |  |                             |                            |
| <b>Software Engineer, Intern</b>   | <b><u>FAPEMA</u></b>                       | <i>São Luís, MA, BRAZIL</i> | <b>Mar/2015 - Oct/2015</b> |
| <ul style="list-style-type: none"><li>• Collaborate to develop and deploy a new management platform written in <b>Java</b>, used to analyze research grants and submissions to new grants, required by the Scientific Community within the State.</li></ul>  |  |                             |                            |
| <b>Software Engineer, Intern</b>   | <b><u>Bank of Brazil</u></b>               | <i>São Luís, MA, BRAZIL</i> | <b>Jul/2013 - Dec/2013</b> |
| <ul style="list-style-type: none"><li>• Collaborated to build new features on internal systems of the 2nd biggest bank in Brazil.</li><li>• Developed several automation scripts using <b>Visual Basic</b> to perform updates on historical transactions used by more than 50000 employees across the country.</li><li>• Collaborated with the team to implement and fix several features on internal systems.</li></ul>   |  |                             |                            |

## Education
